

VIDEO PROTECTION PANEL

The **ARRIS XP** panel is a multi-slotted aluminum panel that can be indexed on the side rails inside of a traffic cabinet. The ARRIS protection elements are the best the industry has to offer. Coaxial protection is accomplished using single or dual **ARRIS IMG Series** protectors. AC Power protection is provided by the **ARRIS IMG-120AC** symmetrical protection device. In addition, power distribution to the cameras is completed with two terminal strips. The ground terminal buss assures essential "Single Point" grounding for the entire protection system. The individual protection elements can be replaced if required by loosening the tapped screws on the front of the panel (removing the panel is not required). The **XP** panel can be populated in virtually any custom configuration. Please call for details and drawings.
